PICKED AND HUNG BEFORE THE FREEZE

RATTLES LIKE ROCKS

Some one has said "*Water, water everywhere and not a drop to drink.*"

We might say "*Corn, corn everywhere and hardly an ear for seed.*"

Too Much Moisture

Reports from 134 County Agents and Farmers Elevator Managers show average moisture of 23% on corn in field on October 29th. No corn with this amount of moisture and temperature near zero can be used for seed.

Much Seed Already Sold

We have been getting telephone calls and letters every day asking us to reserve seed. We have been slow to establish our price. We put ourselves in the customer's place. What is right? What is just? Everybody admits \$10.00 per bushel for seed corn is the cheapest farm seed. Alfalfa and Clover will cost \$2 to \$3 per acre. Wheat \$1.50 to \$2.00 per acre. Seed corn only \$1.00 per acre. The best seed corn is your cheapest seed.

Place Your Order Now, Before It Is Too Late

In 1917 we returned over \$40,000.00 because we could not fill our orders. If you want to be sure of getting our seed for next spring's planting, your order should be in our hands before Jan. 1st. We know we will be compelled to refuse orders this year.

We have selected and hung before the freeze:

Reid's Yellow Dent.

Krug Dent.

Goldmine.

Ninety Day Yellow.

Red Dent.

Johnson County White. Sold out.

Iowa Silvermine. Sold out.

Crated in ear, \$10.00 per bushel. F. O. B. Media.
